PATIENT SAFETY
Please follow these guidelines to help provide a safe environment during your hospitalization:
• Tell caregivers about your medical history, allergies, medications you are taking and existing health conditions such as diabetes.
• Provide a list of your current medications, including herbal supplements, vitamins and over-the-counter products. Do not take or bring medications or products from home while at the hospital unless instructed by your nurse or physician.
• Ask questions about your treatment plan, tests, procedures, medications and discharge instructions. A pharmacist is available to provide information about your medications.
• Ask caregivers to identify themselves before they give medication to you or begin a treatment. All employees are required to wear hospital-issued photo identification badges.
• Your nurse explains medication side effects. Tell your caregivers if you believe you are experiencing side effects.
• Your caregiver asks your name and checks your armband to verify it is correct.
• Remind physicians, caregivers and visitors to wash their hands before caring for you or your child. Clean hands help protect you from germs.
• Request assistance from a caregiver before getting out of bed in order to prevent the risk of a fall.
• Do not leave the nursing unit without permission from your nurse.
• Speak up if a situation feels unsafe or seems out of the ordinary.

If you perceive a safety risk and have suggestions for improving safety in the hospital, please notify your nurse.
